storageGo - Security summary

Files are encrypted on the user device AES-256-GCM, a fresh key per file
before they are sent. Names are encrypted too.
The passphrase never leaves the device; keys are derived with Argon2id.
Sharing seals keys to each recipient X25519, HPKE RFC 9180.
Share links carry their key in the URL fragment, never sent to the server.
All storage is in Algeria Algiers DZ-16, Oran DZ-31.
Recovery: a 24-word kit, and optional organization recovery two administrators.
